- ▶ Bandwidth: 10Hz-30MHz
- ▶ Accuracy (typical): 1%
- ▶ Output noise: < 12mVpp
- ▶ Current range: 200mA_{pk}-600mA_{pk}
- ▶ Coil cross-section: 1.6mm
- ▶ Standard BNC interface

PRODUCT OVERVIEW

Micsig Rogowski current probe RCP series measures AC currents up to 600Apk, max. bandwidth up to 30 MHz, delivers 1% typical accuracy, able to measure high-frequency, large current signals easily and accurately.

Smallest coil cross-section

The cross-sectional diameter of the coil is only 1.6mm, allow engineers measure current in most difficult-to-reach parts of the circuit, such as TO-220, TO-47 MOSFET.

Measure the Id current of MOSFET

Excellent high-frequency measurement capabilities, easily measures high-speed signals, able to observe HF harmonic components when measuring the Id current of MOSFET (as shown the oscillation section).

Applications

- Measurement of 50/60Hz power frequency current
- Measurement of harmonic components in the current
- Measurement of pin currents in MOSFET or IGBT devices
- Measurement of load current and high-order harmonic current in power electronics
