## Product Overview

SIGLENT's SDS1000X-E Super Phosphor Oscilloscopes feature two channel and four channel models. The two channel model is available with a 200 MHz analog bandwidth, a single ADC with 1 GSa /s maximum sample rate, and a single memory module with 14 Mpts of sample memory. The four channel scope is available in 100 and 200 MHz models and incorporates two $1 \mathrm{GSa} / \mathrm{s}$ ADCs and two 14 Mpts memory modules. When all channels are enabled, each channel has sample rate of $500 \mathrm{MSa} / \mathrm{s}$ and a standard record length of 7 Mpts. When only a single channel per ADC is active, the maximum sample rate is $1 \mathrm{GSa} / \mathrm{s}$ and the maximum record length is 14 Mpts. For ease-of-use, the most commonly used functions can be accessed with its user-friendly front panel design.
The SDS1000X-E series employs a new generation of SPO (Super- Phosphor Oscilloscope) technology that provides excellent signal fidelity and performance. The system noise is also lower than similar products in the industry. It comes with a minimum vertical input range of $500 \mathrm{uV} / \mathrm{div}$, an innovative digital trigger system with high sensitivity and low jitter, and a waveform capture rate of 400,000 frames/sec (sequence mode). The SDS1000X-E also employs a 256-level intensity grading display function and a color temperature display mode not found in other models in this class. SIGLENT's latest oscilloscope offering supports multiple powerful triggering modes including serial bus triggering. Serial bus decoding for IIC, SPI, UART, CAN, LIN bus types are included. The XE models also include History waveform recording, and sequential triggering that enable extended waveform recording and analysis. Another powerful addition is the new 1 million points FFT math function that gives the SDS1000X-E very high frequency resolution when observing signal spectra. The new digital design also includes a hardware co-processor that delivers measurements quickly and accurately without slowing acquisition and front-panel response. The features and performance of SIGLENT's new SDS1000X-E cannot be matched anywhere else in this price class. The four channel series support even more functions, including: searching and navigating, on-screen Bode plot, 16 digital channels (Option), an external USB powered 25 MHz AWG module (Option), a USB WIFI adapter (Option), and an embedded application that allows remote control via web browser.

## Key Features

## $100 \mathrm{MHz}, 200 \mathrm{MHz}$ bandwidth models

If Two channel series have one $1 \mathrm{GSa} / \mathrm{s}$ ADC, four channel series have two 1 GSa/s ADCs. When all channels are enabled, each channel has a maximum sample rate of $500 \mathrm{MSa} / \mathrm{s}$. When a single channel per ADC is active, it has sample rate of 1 GSa /s
1 The Siglent SPO technology

- Waveform capture rates up to $100,000 \mathrm{wfm} / \mathrm{s}$ (normal mode) and $400,000 \mathrm{wfm} / \mathrm{s}$ (sequence mode)

■ Supports 256 -level intensity grading and color temperature display modes

- Record length up to 14 Mpts

■ Digital trigger system
I- Intelligent trigger: Edge, Slope, Pulse Width, Window, Runt, Interval, Time out (Dropout), Pattern
Serial bus triggering and decoding (Standard), supports protocols IIC, SPI, UART, CAN, LIN
1 Video trigger, supports HDTV
1 Low background noise with voltage scales from $500 \mu \mathrm{~V} /$ div to $10 \mathrm{~V} /$ div
b 10 types of one-button shortcuts, supports Auto Setup, Default, Cursors, Measure, Roll, History, Display/Persist, Clear Sweep, Zoom and Print
Segmented acquisition (Sequence) mode, divides the maximum record length into multiple segments (up to 80,000), according to trigger conditions set by the user, with a very small dead time segment to capture the qualifying event History waveform record (History) function (maximum recorded waveform length is 80,000 frames)
1 Automatic measurement function for 38 parameters as well as Measurement Statistics, Zoom, Gating, Math, History and Reference functions
if 1 Mpts FFT. Four channel series support Peaks and Markers
H- Math and measurement functions use all sampled data points (up to 14 Mpts )
Math functions (FFT, addition, subtraction, multiplication, division, integration, differential, square root)
1 Preset key can be customized for user settings or factory "defaults"
1 Security Erase mode
H- High Speed hardware-based Pass/ Fail function
t- MSO, 16 digital channels (four channel series only, option)
Br Bode plot, Measuring Power Supply Control Loop Response (four-channel series only)
1 Search and navigate (four-channel series only)
$\downarrow$ USB AWG module (four channel series only, option)
I- USB WIFI adapter (four channel series only, option)
1 Web Browser based control (four channel series only)
1 Large 7-inch TFT-LCD display with 800 * 480 resolution
H- Multiple interface types: USB Host, USB Device (USB -TMC), LAN, Pass / Fail, Trigger Out

- Supports SCPI remote control commands
tr VXI-11+SCPI, Telnet (Port 5024) +SCPI and Socket (Port 5025) +SCPI programming over LAN
W Supports Multi-language display and embedded online help
$t$ Supports Label(four channel series only)
$1-$ Supports counter(four channel series only)
Supports data logger including Sample Logger and Measurement Logger(four channel series only)
- Supports NTP(Network Time Protocol) (four channel series only)

Models and Key Specifications

| Model | SDS1104X-E | $\begin{aligned} & \text { SDS1204X-E } \\ & \text { SDS1202X-E } \end{aligned}$ |
| :---: | :---: | :---: |
| Bandwidth | 100 MHz | 200 MHz |
| Sample rate (Max.) | Two channel series have a single $1 \mathrm{GSa} / \mathrm{s}$ ADC, four channel series have two 1 GSa/s ADCs. When all channels are enabled, each channel has a maximum sample rate of $500 \mathrm{MSa} / \mathrm{s}$. When a single channel per pair is active, that channel has sample rate of $1 \mathrm{GSa} / \mathrm{s}$ |  |
| Channels | 4 (four channel series) <br> 2+EXT (two channel series) |  |
| Memory depth (Max.) | 7 Mpts/CH (not interleave mode); <br> 14 Mpts/CH (interleave mode) |  |
| Waveform capture rate (Max.) | 100,000 $\mathrm{wfm} / \mathrm{s}$ (normal mode), 400,000 $\mathrm{wfm} / \mathrm{s}$ (sequence mode) |  |
| Trigger type | Edge, Slope, Pulse Width, Window, Runt, Interval, Dropout, Pattern, Video |  |
| Serial Trigger and decoder (Std) | IIC, SPI, UART, CAN, LIN |  |
| 16 Digital Channels (four channel series only, option) | Maximum waveform capture rate up to $1 \mathrm{GSa} / \mathrm{s}$, Record length up to $14 \mathrm{Mpts} / \mathrm{CH}$ |  |
| USB AWG module (four channel series only, option) | One channel, 25 MHz , sample rate of 125 MHz , wave length of 16 kpts , isolated output (SAG1021I only) |  |
| Bode plot ( four channel series only) | Minimum start frequency of 10 Hz , minimum scan bandwith of 500 Hz , maximum scan bandwidth of 120 MHz (dependent on Oscilloscope and AWG bandwidth), 500 maximum scan frequency points |  |
| USB WIFI adapter (four channel series only, option) | $802.11 \mathrm{~b} / \mathrm{g} / \mathrm{n}$, WPA-PSK, the adapter must be supplied by Siglent to ensure working |  |
|  | Sample Logger. The Max sample rate is $25 \mathrm{kSa} / \mathrm{s}$, the Min sample rate is $1 \mathrm{Sa} / \mathrm{s}$. |  |
| only) | Measure Logger. The Max interval is 10 minutes, the Min interval is 0.1 s . The Max number of measurements that can be logged is 4 . |  |
| 1/0 | USB Host, USB Device, LAN, Pass/Fail, Trigger Out, Sbus (Siglent MSO) |  |
| Probe (Std) | 4 pcs passive probe PP510 | 4/2 pcs passive probe PP215 |
| Display | 7-inch TFT-LCD (800x480) |  |
| Weight | Four channel series: Without package 2.6 kg ; With package 3.8 kg Two channel series: Without package 2.5 kg ; With package 3.5 kg |  |

## Functions \& Characteristics

## V 7 Inch TFT-LCD Display and 10 One-button Menus

Front panel of the four channel series

Front panel of the two channel series

7-inch TFT -LCD display with 800 * 480 resolution. Most commonly used functions are accessible using 10 different one-button operation keys: Auto Setup, Default, Cursor, Measure, Roll, History, Persist, Clear Sweep, Zoom, Print.

When all channels are enabled, each channel has a maximum sample rate of $500 \mathrm{MSa} / \mathrm{s}$. When a single channel per pair is active, that channel has sample rate of $1 \mathrm{GSa} / \mathrm{s}$

The four channel series has two 1GSa/s ADC chips (channel 1 and 2 share one, channel 3 and 4 share another), so that each channel can achieve sample rates up to $500 \mathrm{MSa} / \mathrm{s}$ and work on bandwidths of 200 MHz when all channels are enabled.

Record Length of up to 14 Mpts

Using hardware-based Zoom technologies and max record length of up to 14 Mpts, users are able to oversample to capture for longer time periods at higher resolution and use the zoom feature to see more

Waveform Capture Rate up to $400,000 \mathrm{wfm} / \mathrm{s}$

With a waveform capture rate of up to $400,000 \mathrm{wfm} / \mathrm{s}$ (sequence mode), the oscilloscope can easily capture the unusual or lowprobability events.
details within each signal.

1- 256-Level Intensity Grading and Color Temperature Display

SPO display technology provides fast refresh rates. The resulting intensity-graded trace is brighter for events that occur with more frequency and dims when the events occur with less frequency.

Serial Bus Decoding Function (Standard)

SDS1000X-E displays the decoding through the events list. Bus protocol information can be quickly and intuitively displayed in a tabular format.

W- True measurement to 14 M points

The color temperature display is similar to the intensity-graded trace function, but the trace occurrence is represented by different colors (color "temperature" ) as opposed to changes in the intensity of one color. Red colors represent events that occur more frequently, while blue is used to mark points that occur less frequently.

History Waveforms (History) Mode and Segmented Acquisition (Sequence)

Playback the latest triggered events using the history function. Segmented memory collection will store trigger events into multiple (Up to 80,000) memory segments, each segment will store triggered waveforms and timestamp of each frame.

## - Gate and Zoom Measurement

SDS1000X-E can measure all sampled data points up to 14 Mpts. This ensures the accuracy of measurements while the math co-processor decreases measurement time and increases ease-of-use.

1M points used to calculate the FFT

The new math co-processor enables FFT analysis of incoming signals using up to 1 M samples per waveform. This provides high frequency resolution with a fast refresh rate. The FFT function also supports a variety of window functions so that it can adapt to different spectrum measurement needs. Four-channel series support Peaks, Markers, a variety of numbers.

## - Customizable Default Key

The current parameters of the oscilloscope can be preset to Default Key through the Save menu.

Through Gate and Zoom measurement, the user can specify an arbitrary interval of waveform data analysis and statistics. This helps avoid measurement errors that can be caused by invalid or extraneous data, greatly enhancing the measurements' validity and flexibility.

H- Hardware-Based High-Speed Pass/Fail

The SDS1000X-E utilizes a hardware-based Pass/Fail function, performing up to 40,000 Pass / Fail decisions each second. Easily generate user defined test templates provide trace mask comparison making it suitable for long-term signal monitoring or automated production line testing.

W 16 Digital Channels/MSO (four-channel series only, option)

16 digital channels enables users to acquire and trigger on the waveforms then analyze the pattern, simultaneously with one instrument.

Search and Navigate (four-channel series only)

The SDS1000X-E can search events specified by the user in a frame. It can also navigate by time (delay position) and historical frames.
th USB 25 MHz AWG Module (four-channel series only, option)

The four channel series supports a USB 25 MHz function/arbitrary waveform generator that is operated from the USB host connection. Functions include Sine, Square, Ramp, Pulse, Noise, DC and 45 built-in waveforms. The arbitrary waveforms can be accessed and edited by the SIGLENT EasyWave PC software.

Bode Plot (four-channel series only)

SDS1000X-E can control the USB AWG module or control an independent SIGLENT SDG instrument, scan a devices amplitude and phase frequency response, and display the data as a Bode Plot. There is also a Vari-level Mode for accurately measuring Power Supply Control Loop Response (PSRR). It can also show the result lists, and export the data to a USB disk.
l- USB WIFI Adapter (four-channel series only, option)

WiFi control of instrumentation can provide a convenient and safe method of configuring and collecting data. This new feature works with a SIGLENT approved WiFi adapter to provide wireless control and communications with SIGLENT SDS1xx4X-E scopes. The adapter must be supplied by Siglent to ensure working.

Web control (four-channel series only)

With the new embedded web server, users can control the SDS1xx4X-E from a simple web page. This provides wonderful remote troubleshooting and monitoring capabilities. The web page has PC and mobile styles that include an embedded virtual control panel.

Sample Logger(four-channel series only)

The Sample Logger is the mode of logging the sampling points over long time durations. . Data is logged into the internal flash or external $U$ disk in real time. After logging is complete, the user can recall the sampling points on the oscilloscope, or analyze the saved data on the computer.

Label(four-channel series only)

When multi-channel measurement is used, corresponding labels are set for different sources to facilitate observation and reading.

- Complete Connectivity

Back panel of the four-channel series

Back panel of the two-channel series

SDS1000X-E supports USB Host, USB Device (USB -TMC), LAN (VXI-11), Pass/Fail and Trigger Out.

## Specifications

## Acquisition System

| Sampling Rate (Max.) | 1 GSa/s (single channel/pair), 500 MSa/s (two channels/pair) |
| :--- | :--- |
| Memory Depth (Max.) | Max 14 Mpts/Ch (single channel/pair), 7 Mpts/Ch (two channels/pair) |
| Peak Detect | 2 ns (Four-channel series) |
| 4ns (Two-channel series) |  |
| Average | Averages:4,16, 32,64,128,256,512,1024 |

38 Types

| Max | Highest value in input waveform |
| :--- | :--- |
| Min | Lowest value in input waveform |
| Ampl | Difference between maximum and minimum data values |
| Top | Difference between top and base in a bimodal signal, or between max and min in an <br> unimodal signal |
| Base | Value of most probable higher state in a bimodal waveform |
| Mean | Value of most probable lower state in a bimodal waveform |
| Cmean | Average of all data values |
| Stdev | Standard deviation of all data values |
| Cstd | Standard deviation of all data values in the first cycle |
| VRMS | Root mean square of all data values |
| Crms | Overshoot after a falling edge;(base -min)/Amplitude |
| FOV | Overshoot before a falling edge;(max -top)/Amplitude |
| FPRE | Overshoot after a rising edge;(max -top)/Amplitude |
| ROV | Overshoot before a rising edge;(base -min)/Amplitude |
| RPRE | the voltage value of the trigger point |
| Level@X | Time between the middle threshold points of two consecutive, like-polarity edges |
| Period | Reciprocal of period |
| Freq | Width measured at 50\% level and positive slope |
| +Wid | Width measured at 50\% level and negative slope |
| -Wid | Duration of rising edge from 10 -90\% |
| Rise Time | Duration of falling edge from 90 -10\% |
| Fall Time | Bwid |

## $\mathscr{S}$ SIGLENT ${ }^{\circledR}$

#### Abstract

About SIGLENT SIGLENT is an international high-tech company, concentrating on R\&D, sales, production and services of electronic test \& measurement instruments.

SIGLENT first began developing digital oscilloscopes independently in 2002. After more than a decade of continuous development, SIGLENT has extended its product line to include digital oscilloscopes, isolated handheld oscilloscopes, function/arbitrary waveform generators, RF/MW signal generators, spectrum analyzers, vector network analyzers, digital multimeters, DC power supplies, electronic loads and other general purpose test instrumentation. Since its first oscilloscope was launched in 2005, SIGLENT has become the fastest growing manufacturer of digital oscilloscopes. We firmly believe that today SIGLENT is the best value in electronic test \& measurement.

## Headquarters:

SIGLENT Technologies Co., Ltd
